Learning target: Understand and evaluate explicit sequence formulas.

A sequence is a function whose inputs here are non-negative integers. An arithmetic sequence changes by a constant addition at every step. Its recurrence states the starting value and update rule; its explicit rule jumps directly to an indexed term. A sequence graph should show isolated points at its allowed integer inputs.

Try the mathematics

Task 1. Let u0=12 and u(n+1)=u(n)+3. Make a table for n=0,1,2,3,4, give an explicit rule, and plot these five points. State the domain.
