Identify the basic matrix types and state their dimensions.

Key skills | Free preview

Learning target: Identify the basic matrix types and state their dimensions.

Matrix dimensions are recorded as rows by columns. Different names describe different properties, so a matrix may belong to several types at once. For example, an identity matrix is also square, diagonal, symmetric and binary. Transposition exchanges rows with columns; it does not reverse the order of entries within each original row.

Try the mathematics

Task 1. Classify R=[2,5,7], C=[[2],[5]], Z=[[0,0],[0,0]], I=[[1,0],[0,1]], D=[[3,0],[0,6]], and U=[[1,4],[0,2]]. Give each order and every applicable name among row, column, square, zero, identity, diagonal, symmetric, triangular and binary.
