Understand graphing domains, ranges and model parameters.

Key knowledge | Free preview

Learning target: Understand graphing domains, ranges and model parameters.

A graphing tool needs explicit rules, a suitable window and an interpretation of its inputs. Changing an intercept parameter shifts a linear graph without changing its gradient. A table can confirm a visually estimated intersection, and algebra provides an independent check. A graph’s continuous appearance does not remove integer or other practical domain restrictions.

Try the mathematics

Task 1. Enter y1=18+4x and y2=42+2x in a graphing tool. Use 0≤x≤20 and 0≤y≤130. Make a table at x=0,6,12,18 and find the intersection both graphically and algebraically.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
