Choose the mathematical knowledge and methods needed for a contextual investigation.

Key skills | Free preview

Learning target: Choose the mathematical knowledge and methods needed for a contextual investigation.

A model should be checked against observations that were not used solely to choose its constant. Inverse variation is plausible for a fixed divisible task performed by equally productive workers, but communication and workspace constraints can disrupt it. Compare predicted and observed values, explain discrepancies and state the range in which the proposed model has useful support.

Try the mathematics

Task 1. A packing job takes 12 hours with 2 workers, 8 hours with 3, 6 hours with 4 and 5 hours with 6. Form an inverse model using the first observation, test every row and predict for 5 workers.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
