Use numerical distributions to answer statistical questions.

Key skills | Free preview

Learning target: Use numerical distributions to answer statistical questions.

Comparisons should use both centre and spread and should identify the measured variable and units. Parallel boxplots share one numerical axis so their positions can be compared fairly. A higher median does not mean every member of that group has a higher value. A contextual conclusion should acknowledge overlap and sample limitations.

Try the mathematics

Task 1. Group A waiting times are 2,4,5,6,7,8,9,11; group B times are 3,5,7,9,11,13,15,17 minutes. Find each five-number summary using medians of halves, and draw parallel boxplots on one scale.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
