Understand assignment and the Hungarian procedure.

Key knowledge | Free preview

Learning target: Understand assignment and the Hungarian procedure.

An assignment pairs each person with one task and each task with one person. Subtracting a constant from every entry in a row or column changes every complete assignment by the same total, preserving the optimum. If reduced zero entries allow an independent assignment, the sum of the reductions gives a lower bound that this assignment reaches.

Try the mathematics

Task 1. Four workers A–D have task costs [[9,2,7,8],[6,4,3,7],[5,8,1,8],[7,6,9,4]]. Perform row and column reductions and choose independent zeroes to find a minimum-cost assignment.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
