Understand graphing-domain and range settings for models and relations.

Key knowledge | Free preview

Learning target: Understand graphing-domain and range settings for models and relations.

Graph settings affect which patterns a reader can see. An appropriate scatterplot window includes all observations, uses the actual numerical horizontal values and leaves enough room to inspect a fitted line. Residual plots need their own vertical scale centred around zero. The plotting domain and the domain in which a prediction is supported are related but not identical.

Try the mathematics

Task 1. For x=1,2,3,4,5 and y=2,4,5,4,5, plot the observations and y-hat=2.2+0.6x. Propose a useful window, then produce a residual plot for -0.8,0.6,1,-0.6,-0.2.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
