Communicating a mathematical investigation

Key skills | Free preview

Learning target: Explain results and conclusions in mathematical notation and accessible language, interpreting them in context.

A useful mathematical report connects the formulation, calculation and contextual interpretation. Include the quantities and units needed to understand the result, and explain why it answers the question. State a material assumption or limitation without obscuring the main finding. A reader should be able to assess the recommendation without reconstructing the entire investigation.

Try the mathematics

Task 1. Prepare a short owner-facing recommendation containing the rule, feasible interval, result, units and one limitation.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
