Exponential and logarithmic graph pairs

Key skills | Free preview

Learning target: Draw circular, exponential and simple logarithmic graphs on a stated domain and discuss their features, including asymptotes.

An exponential function with base greater than one is one-to-one, and its logarithm is the inverse. Reflect exact points to connect the graphs. Domain and range exchange, so the exponential's horizontal asymptote corresponds to the logarithm's vertical asymptote. Shifts change these features and must be applied to the whole rule.

Try the mathematics

Task 1. Sketch $f(x)=2^x$ and $g(x)=\log_2(x)$ together. Use three exact points for each and state their domains, ranges and asymptotes. Verify both inverse identities with their correct domains.
