Selecting mathematics

Key skills | Free preview

Learning target: Select relevant mathematics from one or more areas for the questions being investigated.

Choosing relevant mathematics is part of the solution, not a preliminary label. Explain how the variables and the objective determine the methods you use. Develop a model or statistical formulation from the supplied information, check its conditions, and interpret the result in the original context. A numerical answer needs a reasoned connection to the question.

Try the mathematics

Task 1. A simple random sample of 200 items from a very large production stream contains 64 defects. Investigate a population-defect estimate and approximate 95% interval using $z=1.96$. A supplier claims the defect proportion is 0.25. Select suitable mathematics for estimating the defect rate, and state its main sampling assumptions.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
