Use technology appropriately to support mathematical analysis

Key skills | Free preview

Learning target: Use technology appropriately to support mathematical analysis.

Use a calculator table, spreadsheet or short program to examine $u_0=100$, $u_{n+1}=0.8u_n+60$. Keep a record of inputs, iteration order and displayed precision. The closed form $300-200(0.8)^n$ gives an independent benchmark. Expected outputs below are mathematical checks for your run, not a claim that software has already run.

Try the mathematics

Task 1. Use the table or a loop to identify the first integer n with $u \geq 200$. Check your result against the symbolic inequality and state how you handled the negative logarithm.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
