Set graph domains and ranges that reveal the relevant mathematical features

Key skills | Free preview

Learning target: Set graph domains and ranges that reveal the relevant mathematical features.

Use a calculator table, spreadsheet or short program to examine $u_0=100$, $u_{n+1}=0.8u_n+60$. Keep a record of inputs, iteration order and displayed precision. The closed form $300-200(0.8)^n$ gives an independent benchmark. Expected outputs below are mathematical checks for your run, not a claim that software has already run.

Try the mathematics

Task 1. Graph $u(x)=300-200(0.8)^x$ for $0\leq x\leq 20$, using a vertical window $90\leq u\leq 310$. Overlay the integer-week table. Explain the domain/range choices and why an apparent flat line near 300 needs interpretation.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
