Understand how analysis supports valid conclusions in context

Key knowledge | Free preview

Learning target: Understand how analysis supports valid conclusions in context.

Consider an illustrative river 120 m wide. Water flows east at 1.5 m/s, and a boat can move at 2.5 m/s relative to the water. North points directly across. Ignore acceleration and bank effects. A different navigation objective can change the best heading, so state the required landing condition.

Try the mathematics

Task 1. The boat uses the calculated directly-opposite heading. An illustrative trial records crossing time 61 s and eastward landing error 2 m. Compare these with the ideal prediction and give two plausible modelling limitations without claiming a proven cause.
