Produce tables, graph families or other result collections that support general analysis

Key skills | Free preview

Learning target: Produce tables, graph families or other result collections that support general analysis.

Use the population {0,2,4,6}, drawing uniformly and independently with replacement. Its mean is 3 and variance is 5. A simulation stores one mean per sample; a graph of $g(x)=\sqrt{(5/x)}$ provides a separate standard-error model. Record your procedure and actual outputs, using the supplied results only as checks.

Try the mathematics

Task 1. Create a table for n=1,2,8,32 of $E(\bar{X})$, $Var(\bar{X})$ and $SD(\bar{X})$, then run the sampling loop for each n. State the exact expected table and how to compare empirical outputs.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
