Interpret technology output in relation to the mathematical task and verify it

Key skills | Free preview

Learning target: Interpret technology output in relation to the mathematical task and verify it.

Use the population {0,2,4,6}, drawing uniformly and independently with replacement. Its mean is 3 and variance is 5. A simulation stores one mean per sample; a graph of $g(x)=\sqrt{(5/x)}$ provides a separate standard-error model. Record your procedure and actual outputs, using the supplied results only as checks.

Try the mathematics

Task 1. Enumerate all 16 ordered pairs for n=2 and use their means as a check of the random program. Give the exact frequency distribution and two invariants every run must satisfy.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
