Identify relevant data, variables, constraints and other significant features of an investigation

Key skills | Free preview

Learning target: Identify relevant data, variables, constraints and other significant features of an investigation.

An illustrative population is modelled by $P' = 0.2P(1-P/1000)$, with $P(0)=100$ and time measured in weeks. The population observations supplied here are invented for mathematical practice. Compare model behaviour, numerical approximations and contextual conclusions while keeping the model's assumptions separate from the example data.

Try the mathematics

Task 1. Identify the state variable, parameters, initial condition and constraints in the logistic model. Find equilibrium populations, the initial rate and a suitable interpretation of 1000.
