Generate tables, symbolic expressions, graph families or result collections that support general analysis

Key skills | Free preview

Learning target: Generate tables, symbolic expressions, graph families or result collections that support general analysis.

Investigate $P' = 0.2P(1-P/1000)$, $P(0)=100$, with the exact benchmark $P(t)=1000/[1+9e^{(-0.2t)}]$. A numerical table, symbolic derivative and graph answer different questions. Keep step size, initial values and domain constraints visible. The listed checkpoints support verification of your implementation and are not a claim about an unseen software run.

Try the mathematics

Task 1. Build columns t, Euler h=1 and exact P(t) for t=0,1,2. Repeat the Euler calculation to t=2 using h=0.5 and h=0.25. Give expected checkpoints and explain the comparison.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
