Explain a technology solution through its formulation, solution and interpretation

Key skills | Free preview

Learning target: Explain a technology solution through its formulation, solution and interpretation.

Investigate $P' = 0.2P(1-P/1000)$, $P(0)=100$, with the exact benchmark $P(t)=1000/[1+9e^{(-0.2t)}]$. A numerical table, symbolic derivative and graph answer different questions. Keep step size, initial values and domain constraints visible. The listed checkpoints support verification of your implementation and are not a claim about an unseen software run.

Try the mathematics

Task 1. Write a reproducible technology report for the time to reach 500, using the exact formula and a graph or table. Include formulation, solution, verification and contextual interpretation.

Continue with the full worksheet

The complete resource has 2 focused task sets and substantive worked solutions. Use an exercise book or print the A4 worksheet. This preview shows the first task without its full solution.
